

TACTICAL DECISION GAMES

Fire Ground Considerations:

- Stop spread of fire to east and west of building
 - Fire attack on involved unit
 - Determine façade fire involvement and structural integrity (In Simi Valley one façade just failed no apparent reason)
- ***Remember the “State Fire” LACoFD lost Eng. *JAMES E. HOWE 1991 in Huntington Park

Fire Ground Company Actions:

1. Size up to OCD and balance out the assignment to a “B” Assgn with a loom up en-route and on-scene add 2 TF’s , 2 BC’s, 2 PM RA’s and 2 TAC’s, staging location
2. Use the wagon battery to knockdown main body of fire after a water supply is complete. Follow up with handlines and check façade/attic has fire.
3. Have E77 check for the east exposure (more potential for fire loss) pulling ceiling to stop horizontal spread of fire
4. T89 to the roof for a heat hole over fire. Be ready for a strip. Check façade
