### Role-playing Ideas

- Have one member “role play” the position of “Engineer” in order to provide a solution.
- You can also divide members into groups in order to develop solutions.
- Solutions should be submitted via email to [tdg@lafdtraining.org](mailto:tdg@lafdtraining.org)
- Solutions from the field can be viewed online at [www.LAFDtraining.org](http://www.LAFDtraining.org).

You are an Engineer assigned to Fire Station 83. Engine 83 and Rescue 39 are dispatched to a heart attack. The incident is located on the 15th floor of a 19 story high rise building. RA 39 and Engine 83 arrive onscene at the same time. Your crew with RA 39 enter the building and go aloft. You stay with the apparatus in front of the high rise to maintain security. It is 1300 hours on a weekday and the lobby and sidewalk area are very busy with foot traffic. Six . banks of elevators

are visible in the lobby. You are approached by the building security officer. He is carrying the package shown above. He states the package has been at his desk “unclaimed” for two days. It appears to have excess postage and is bulky. It appears to have oily stains on it and it is stamped “Confidential” in several places. There is no name on it. It is taped very tightly and smells odd. You are concerned about this package. You make the decision not to touch the package.

You attempt to contact your Captain on channel 10, but get no answer. You also try on channel 3 and 8 with no response. There is only one security officer on-duty.

### Engineer Guidelines

**What radio communications will you make, if any?**

**What communications will you provide to the security officer?**

**What resources will you order from OCD, if any?**

**What actions will you take to protect the building occupants?**
