

TACTICAL DECISION GAMES

TDG #4 Solution Worksheet

Fire Ground Considerations:

Life hazard – firefighter down

Location of firefighter down

Training – RIC company sog's

Experience of crew – experience and training in RIC operations

Safety – PPE's, SCBA, webbing, drop-bag, rescue channel

Occupancy – size and type

End of Nozzle Company Actions:

Captain – remain at nozzle and attach the FF drop bag hooks on the shutoff of the 1" rescue line while staying in direct contact with the end of the 1" rescue line.

Firefighters – place drop bag in face piece pouch with drop line paying out of the bottom of the pouch and begin performing a side to side sweep toward the sound of the PASS device. Once downed firefighter is located, begin dragging him/her back towards the 1" rescue line guided by the voice or sounds of the Captain on the end of the rescue line. Once the firefighters reach the Captain, the Captain will disconnect the drop-bags and lead the crew to safety following the 1" line out.
